## LIFE HISTORY EVOLUTION IN PLANTS

Book Condition: New. Publisher/Verlag: Springer Netherlands | "The lack of discussion of the life histories of modular organisms is the weakness of this book that I most regret. . . . Modular organisms are different. " S. C. Steams: The Evolution of Life Histories (1992) Life-history theory endeavours to increase our understanding of the processes whereby the broad features of the life cycles of organisms, such as the timing and magnitude of reproduction, have evolved. Although reproductive traits have dominated as study objects due to their immediate importance for evolutionary success, much work has also been conducted on patterns of development, growth and senescence, as well as on the shifts in resource allocation related to these processes. The basic axiom of life-history theory is that patterns of life histories, such as reproductive traits, are subject to evolutionary explanation. This idea can be traced back at least as far as Darwin's Origin of Species (1859). In his discussion of plant domestication, Darwin wrote: "I cannot doubt that the continued selection of slight variations, either in the leaves, the flowers, or the fruit, will produce races differing from each other chiefly in these characters". Darwin was impressed by the success of plant breeders in moulding the growth and reproductive parameters of cultivated plants, and believed that natural selection could have a similar impact in natural populations. | List of Contributors. Preface. 1. Modularity and Plant Life Histories; T. Vuorisalo, P. Mutikainen. 2. Modelling and Measuring Plant Life Histories; J. Ehrlén. 3. Fitness Interactions among Plants: Optimal Defence and Evolutionary Game Theory; J. Tuomi, et al. 4. Genetic Variation in Life-History Traits: Heritability Estimates within and Genetic Differentiation among Populations; S.J. Mazer, G. LeBuhn. 5. Resource Allocation, Trade-Offs, and Reproductive Effort in Plants; E.G. Reekie. 6. Phenological and Developmental Costs of Male Sex...
