Reviews

Undoubtedly, this is the best work by any author. It is really simplified but shocks within the 50 % in the publication. Its been written in an extremely straightforward way and is particularly just following i finished reading this publication by which basically altered me, modify the way in my opinion.

Not illustrated. 1898 Excerpt: . the surface is covered by the usual soil resulting from the decomposition Mining Handbook to the Colonv of W.A. Harry P. Woodward, pp. 36, 37. Perth; By Aothority, 1885., of the schists in situ, which, in the depressions, has accumulated to a very considerable deposit forming wide sandy flats. The higher portions, however, from which the finer products of degradation have been removed, are more frequently covered by quantities of ironstone, consisting of fragments of highly ferruginous clay, representing those portions which have become hardened, and charged, no doubt by a concretionary process, with the iron of the original rock mass, now become to a great extent bleached and-decomposed. On the western side the superficial covering is probably in great part more of an alluvial character, no doubt of considerably greater thickness; and to it, even now, are being added the more or less sedimentary accumulations of Lake Raeside. The waters of this lake, in addition to the deposition of mechanically suspended silt, have left in places, chiefly as a result of evaporation, a siliceous residue of lime salts, particularly at the outer margins. In some cases the lime is sufficiently free from other substances to form, when burnt, a local supply for building purposes, but as a rule is too impure. Apart from the influence which the existence of the salt pools or lake may have had upon its present form, practically the whole of the material filling the depression on the western side...
